[View Portfolio](#)

Systems-First Marketing Technologist specializing in Marketing Operations (MOPs), API-driven pipelines, and infrastructure troubleshooting. I eliminate manual chaos by engineering leak-proof tracking, automating complex workflows (Zoho, n8n, Deluge, Webhooks), and deploying AI-assisted scripts. Proven mentor and operational leader with a 4.70/5.0 CSAT rating across 130+ learners for translating complex backend logic into actionable, step-by-step documentation.

PROFESSIONAL EXPERIENCE

MOPs & Technical Enablement Specialist

Jan 2025 – Present

STAENZ Digital Marketing Academy

- Event Ingestion & WhatsApp Ticketing Engine:** Architected an event-driven delivery pipeline (WooCommerce → FunnelKit → Zoho Flow → Custom Deluge → AiSensy WhatsApp API), executing regex E.164 phone sanitization for sub-2s ticket delivery across 5,000+ passes with zero API rejections.
- Deterministic RAG Support Engine:** Deployed a production Telegram support bot on PythonAnywhere utilizing Python (bot.py), Groq LPU inference (< 500ms latency), and a structured Knowledge_Base.json schema, deflecting 80%+ of repetitive student queries with strict anti-hallucination guardrails.
- Idempotent Multi-Attempt Intake Engine:** Engineered an automated certification exam pipeline (Fluent Forms → Fluent Support → Zoho Flow → Zoho Sheet → Zoho Cliq), enforcing 3-attempt limits via single-row composite-key upsert logic; eliminated 100% of duplicate records and manual merge labor.
- Technical Troubleshooting & Enablement:** Maintained a 4.70 / 5.0 resolution CSAT across 137 verified cohort evaluations (79.6% 5-star ratings); resolved complex hosting, DNS CNAME, server-side dataLayer, and tracking pixel blockers through structured SOPs.

Growth Systems & MOPs Consultant

Oct 2025 – Present

Padmasambhav Digital (Independent)

- Server-Side Telemetry & Meta CAPI:** Provisioned server-side GTM containers on GCP with custom subdomain DNS routing; implemented dual-tag deduplication (event_id) to bypass ad-blockers, lifting Meta Event Match Quality (EMQ) to 8.4+ and recovering 15–25% lost conversion signals.
- Financial Ledger Reconciliation Engine (Madhechi):** Engineered an automated Power Query ETL pipeline joining disparate Shopify order tables with Razorpay settlement dumps on composite transaction keys; transformed a 3-day manual spreadsheet audit into a 1-click refresh, reclaiming 20+ hours/month.
- Infrastructure Security & Gateway Triage:** Restored 3 malware-compromised client deployments by eradicating core PHP backdoors, repairing corrupted MySQL tables, and re-authenticating Razorpay API webhooks within 4 hours to prevent revenue interruption.
- Behavioral CRO & Client-Side State Tracking:** Configured first-party cookie session depth tracking (staenz_pv_count) in GTM, executing proactive live-chat triggers at PV > 3 and dynamic +10% DOM price escalation scripts on high-intent WooCommerce visits (PV > 6).

Digital Operations & B2B Enablement

Jun 2021 – Sep 2025

Swami Samarth Electronics Pvt. Ltd.

- Enterprise Portal Setup:** Directed vendor registration and technical catalog configuration across the Government eMarketplace (GeM), facilitating enterprise compliance and a 10,000-unit government order.
- Digital Asset Infrastructure:** Structured company-wide technical documentation, digital spec sheets, and high-resolution commercial photoshoots in Google Workspace for streamlined sales distribution.
- Multi-Channel Catalog Operations:** Managed catalog listings, RFQ handling, and handler coordination across B2B aggregators (IndiaMart, TradeIndia).

PEER & STUDENT VALIDATION

"Prompt response with solutions. If he can't provide the solution immediately, he makes sure he investigates and resolves the technical problem completely. Very calm and composed style."
— Sahil Barmate
Performance Marketing Cohort

TECHNICAL CAPABILITIES

PIPELINES & WEBHOOKS

- Zoho Flow
- Custom Deluge Scripts
- Make.com / n8n
- Webhooks & HTTP APIs
- AiSensy WhatsApp Cloud API

APPLIED AI & DATA

- Python (LLM Integration)
- Groq API & RAG JSON
- Excel Power Query
- Custom HTML/JS DOM logic

TRACKING & TELEMETRY

- 1st-Party Cookies
- Meta CAPI
- Server-Side GTM (sGTM)
- GCP App Engine
- GA4
- DNS CNAME Routing

WEB & E-COMMERCE

- WooCommerce
- Shopify Flows
- WordPress Hardening
- Razorpay Integrations
- Tawk.to API
